0.1 Github and group projects

- Your main project repository lives on the meet-projects group on Github (each group got their own URL - if you forget, go to http://github.com/meet-projects and find your project.

- To copy your project files, do `git clone http://github.com/meet-projects/YOUR_PROJECT_NAME` in the terminal

- When you are done: `git add --all git commit -am "a comment about what you did" git pull git push`

- Important that when you push, you LOOK AT THE MESSAGE. If it says FAILED or CONFLICT, call over an instructor or TA to fix it.
